

§3-4 Derivatives of Trigonometric Functions

Homework. : 3,11,14,17,22,30,35,37,38,39,44,46,47

欲得三角函數的微分，需先得知(I)式中的極限值.

$$(I) \quad (i) \quad \lim_{\theta \rightarrow 0} \frac{\sin \theta}{\theta} = 1 \quad .$$

$$(ii) \quad \lim_{\theta \rightarrow 0} \frac{\cos \theta - 1}{\theta} = 0 \quad .$$

Proof of (I-i) :

radius=OA=1

$$\overline{AB} < \widehat{AC} < \overline{CD}$$

$$\Downarrow \quad \Downarrow \quad \Downarrow$$

$$\Rightarrow \sin \theta < \theta < \tan \theta \quad (\theta > 0)$$

$$\Rightarrow 1 < \frac{\theta}{\sin \theta} < \frac{1}{\cos \theta}$$

$$\Rightarrow \lim_{\theta \rightarrow 0^+} \frac{\theta}{\sin \theta} = 1 \quad .$$

$$\text{Similarly, } \lim_{\theta \rightarrow 0^-} \frac{\theta}{\sin \theta} = 1 \quad \Rightarrow \quad \lim_{\theta \rightarrow 0} \frac{\theta}{\sin \theta} = 1 \quad .$$

註：(i) Why $\widehat{AC}(=\theta) < \overline{CD}$?

扇形 OAC 的面積 < 三角形 OCD $\Rightarrow \frac{1}{2}\theta < \frac{1}{2}\overline{CD} < 0 \Rightarrow \widehat{AC} < \overline{CD}$.

(ii) 利用(I-i)和半角公式，可得(I-ii)。

$$(II) (i) (\sin x)' = \cos x \quad (\cos x)' = -\sin x$$

$$(\tan x)' = \sec^2 x \quad (iv) (\cot x)' = -\csc^2 x$$

$$(\sec x)' = \sec x \tan x \quad (\csc x)' = -\csc x \cot x$$

Proof of (II-i) :

$$\begin{aligned} (\sin x)' &= \lim_{h \rightarrow 0} \frac{\sin(x+h) - \sin x}{h} \\ &= \lim_{h \rightarrow 0} \frac{\sin x \cos h + \cos x \sin h - \sin x}{h} \\ &= \sin x \lim_{h \rightarrow 0} \frac{\cos h - 1}{h} + \cos x \lim_{h \rightarrow 0} \frac{\sin h}{h} \\ &= \cos x. \end{aligned}$$

註：嚴格的寫法，需先說明第三等式兩個極限存在，因此第二等式等於第三等式。

Proof of (II-iv) :

$$(\cot x)' = \left(\frac{\cos x}{\sin x} \right)' = \frac{-\sin^2 x - \cos^2 x}{\sin^2 x} = -\csc^2 x.$$

Example 1 : $\lim_{x \rightarrow 0} \frac{\sin 3x}{x} = ?$

Solution : $\lim_{x \rightarrow 0} \frac{\sin 3x}{x} = \lim_{x \rightarrow 0} \frac{3x}{x} = 3.$

Example 2 : $\lim_{t \rightarrow 0} \frac{\sin^2 3t}{t^2} = ?$

Solution : $\lim_{t \rightarrow 0} \frac{\sin^2 3t}{t^2} = \lim_{t \rightarrow 0} \frac{(3t)^2}{t^2} = 9.$

Example 3 :

求 $\lim_{\theta \rightarrow 0^+} \frac{s}{d} = ?$

Solution :
$$\lim_{\theta \rightarrow 0^+} \frac{s}{d} = \lim_{\theta \rightarrow 0^+} \frac{r\theta}{2r \sin \frac{\theta}{2}} = \lim_{\theta \rightarrow 0^+} \frac{\theta}{2 \sin \frac{\theta}{2}}$$

$$= \lim_{\theta \rightarrow 0^+} \frac{\theta}{2 \cdot \frac{\theta}{2}} = 1.$$
