Vocabulary (40%)

Choose the word that best completes the sentence.

1. There is so much that is changing right now, and the _____ can be lasting.
(A) innuendo
(B) therapeutics
(C) bulk
(D) fallout
2. Inflation remains untamed, and the services _____ continues to shrink.
(A) prospect
(B) sector
(C) project
(D) feat
3. A thermometer is a tool _____ which temperature is precisely measured.
(A) for
(B) to
(C) with
(D) in
4. Despite the challenges ahead of us, the future is not all _____.
(A) bleak
(B) generic
(C) empirical
(D) bewildering
5. Nobody likes Nathan, particularly because of his condescending attitude. In fact, many feel he is _____.
(A) alluring
(B) entitled
(C) reticent
(D) charismatic
6. An organization _____ which businesses submit applications, for the purpose of obtaining financial information about potential customers, is known as a credit bureau.
(A) for
(B) to
(C) on
(D) under
7. Sabrina is articulate and always stays on top of things. She is a lot of things. But she is not _____.
(A) a no-brainer
(B) meticulous
(C) scatterbrained
(D) cogent

8. Alex says whatever pops into his head. Not surprisingly, he usually makes _____ decisions.

- (A) spur-of-the-moment
- (B) calculated
- (C) foolproof
- (D) far-fetched

9. The COVID-19 pandemic had _____ social and economic consequences.

- (A) dubious
- (B) esoteric
- (C) benign
- (D) unprecedented

10. The shortage of labor is a long-standing issue that has been hiding in _____ sight.

- (A) unnoticeable
- (B) plain
- (C) obscure
- (D) riveting

11. An axis is a straight line _____ which an object rotates.

- (A) in
- (B) for
- (C) about
- (D) to

12. While investing is not rocket science, it can be a real _____ if one does not know how to take calculated risks.

- (A) pretext
- (B) accomplice
- (C) minefield
- (D) mandate

13. It is probably an _____ to say that the new solution will solve this problem once and for all.

- (A) equivocation
- (B) overstatement
- (C) aptitude
- (D) excursion

14. Entrusting the final design choices to the architect's _____ turned out to be a wise decision, resulting in a building that is both stunning and environmentally sustainable.

- (A) inception
- (B) corollary
- (C) empathy
- (D) discretion

15. Unlike explicit knowledge, which can be readily documented or shared, _____ knowledge—such as intuition in decision-making—is difficult to articulate, as it is acquired through extensive hands-on experience and is often difficult to express in words.

- (A) tacit
- (B) opaque
- (C) seminal
- (D) plausible

16. Misinformation is all over the place—almost everything we've read about their _____ is likely inaccurate. They go way back and have always been close friends.

- (A) comradeship
- (B) tranquility
- (C) affinity
- (D) feud

17. Due to eased tariff tensions, the surge in tariff-driven panic buying has _____.

- (A) mushroomed
- (B) intensified
- (C) subsided
- (D) vented

18. The economy of the country has gone south. As a result, many communities have _____ impoverished neighborhoods.

- (A) morphed into
- (B) exacerbated
- (C) curbed
- (D) reaped

19. They face _____ prejudice in their attempts to find employment. Not surprisingly, their struggle for equal rights remains an uphill battle.

- (A) rampant
- (B) ephemeral
- (C) posthumous
- (D) stellar

20. While her life isn't always sunshine and rainbows, she _____ to address challenging issues head-on.

- (A) ducks
- (B) opts
- (C) shuffles
- (D) hedges

Cloze (20%)

Select the most appropriate answer to complete each blank in the text below.

Critical thinking is often __21__ as a way to __22__ others harshly, but in fact, it is the process of questioning, analyzing, interpreting, evaluating, and making __23__ judgments. At its core, critical thinking involves making reliable decisions based on trustworthy sources. Critical thinking is not about __24__ negativity; rather, it allows individuals to break down complex problems, interpret information, and reach well-reasoned conclusions. This skill is essential in various situations, such as assessing political motivations and analyzing arguments. A critical thinking __25__ is developed over time through learning and practice, rather than being an innate __26__. In academic settings, critical thinking is __27__ linked to arguments. In college, students are encouraged to assess others' reasoning critically and __28__ their own arguments. To develop critical thinking, people must master key abilities such as defining the purpose and context of their reasoning, __29__ information sources, and presenting their arguments clearly. By refining these abilities, individuals can enhance their capacity to analyze information logically, make __30__ decisions, and engage in constructive discussions.

- 21. (A) misunderstood (B) considered (C) deemed (D) perceived
- 22. (A) approach (B) compliment (C) criticize (D) persuade
- 23. (A) reckless (B) informed (C) definitive (D) intuitive
- 24. (A) dwelling on (B) overlooking (C) shrugging off (D) scorning
- 25. (A) hearsay (B) study (C) slander (D) mindset
- 26. (A) affluence (B) prosperity (C) trait (D) fluke
- 27. (A) occasionally (B) primarily (C) rarely (D) sporadically
- 28. (A) construct (B) eradicate (C) suppress (D) annihilate
- 29. (A) hoaxing (B) misconstruing (C) deceiving (D) scrutinizing
- 30. (A) ill-advised (B) flimsy (C) sound (D) vulnerable

Reading comprehension (40%)

Read the following passages and select the best answer to each question.

Limb loss affects millions worldwide, with around 1.9 million people living with amputation in the U.S. alone—a figure expected to double by 2050. These individuals rely on prosthetic limbs to regain mobility, which can range from artificial hands and arms to legs, knees, and ankles.

Traditional prostheses are primarily designed to replicate the appearance of missing limbs, but they typically offer little beyond aesthetics in terms of function. As passive devices, they do not restore natural movement, affecting the quality of life for amputees. For instance, individuals with prosthetic legs often walk with an unnatural gait, leading to reduced mobility and increased risks of falling. Additionally, the strain of overcompensating with their intact side can cause long-term shoulder and back issues.

To address these limitations, some amputees turn to bionic prostheses, which incorporate advanced technology to restore lost function. Research universities such as the University of Michigan and MIT are pioneering ways to integrate machines with the human body. These high-tech prostheses are battery-powered and controlled by neural signals, allowing users to translate thoughts into movement. Bionic limbs offer precise control over individual fingers, enable natural walking, and even support active sports such as motorcycling, skiing, and surfing. Unlike traditional prosthetics, bionic versions can simulate touch through built-in sensors, relaying sensory feedback to the brain in real time. This advancement allows users to experience textures, differentiate between hot and cold, and feel as if the prosthetic is truly part of their body.

Despite these benefits, affordability remains a significant barrier. Bionic prostheses can cost tens of thousands of dollars, preventing widespread adoption among those who need them most. However, advances in 3D printing are driving down costs by enabling the production of low-cost bionic limbs using accessible materials. This breakthrough has the potential to make sophisticated prostheses more affordable, particularly for individuals from low-income backgrounds.

The development of bionic prosthetics represents a transformative step in improving mobility and quality of life for amputees. While challenges remain, innovations such as 3D printing are paving the way for accessible, functional prosthetic solutions, bringing hope to millions seeking better alternatives to traditional artificial limbs.

31. What is a prosthesis?

- (A) A surgical procedure to repair damaged body part.
- (B) A device used to replace a missing body part.
- (C) A medication used to treat chronic pain.
- (D) A type of medical condition adversely affecting some people.

32. According to the passage, which of the following statements is most likely false?

- (A) Some prosthetic devices enable users to perceive temperature differences.
- (B) Prosthetic knees are uncommon in today's market.
- (C) Certain prostheses allow users to feel surface textures.
- (D) In five years, over two million people in the U.S. are expected to require prostheses.

33. According to the passage, which of the following words is closest in meaning to "intact"?

- (A) complete
- (B) gait
- (C) tilted
- (D) impaired

34. What is a drawback of conventional prostheses?

- (A) They are expensive.
- (B) They rely on battery power.

- (C) They provide limited functional support.
- (D) All of the above.

35. What does the word "aesthetics" most closely refer to?

- (A) functionality
- (B) convenience
- (C) affordability
- (D) pleasing appearance

36. Which of the following is an upside of bionic prostheses?

- (A) They enable direct connections between the mind and the prosthesis.
- (B) They support natural body movement.
- (C) They allow users to participate in sports.
- (D) All of the above.

37. Which of the following is a downside of conventional prostheses?

- (A) They are less affordable than bionic alternatives.
- (B) They may be inaccessible without 3D printing technology.
- (C) They are unable to restore natural movement.
- (D) All of the above.

38. Which of the following sports can be performed with the aid of bionic prostheses?

- (A) Cycling
- (B) Skateboarding
- (C) Swimming
- (D) All of the above

39. What does the word "amputation" mean?

- (A) The surgical removal of a limb or part of a limb.
- (B) The replacement of a joint with an artificial one.
- (C) The process of repairing an injured body part.
- (D) The treatment of a bodily injury.

40. Which of the following statements is true about bionic prostheses?

- (A) They enable the development of 3D printing.
- (B) They offer precise control of finger movements.
- (C) They reduce the cost of 3D-printing materials.
- (D) They are exclusively produced by the University of Michigan and MIT.

Impressionism emerged in France during the late 19th century as the first modern art movement, challenging traditional artistic norms. Pioneering artists such as Claude Monet and Edgar Degas, along with their contemporaries, faced rejection from the Salon, the official state-sponsored exhibition. In response, they organized their own independent exhibition in Paris in 1874, marking the beginning of a revolutionary approach to painting. Their works were distinguished by vibrant colors, an emphasis on light, unconventional subject matter, and thick brushwork.

Unlike previous art movements that favored muted tones and dark backgrounds, Impressionists embraced bright hues such as red, green, yellow, and orange. Their fascination with the interplay of light and color led them to paint outdoors, capturing fleeting moments in nature. Monet, for instance, famously painted the same scene multiple times at different hours to document the shifting effects of light.

The subjects of Impressionist paintings reflected their everyday surroundings. While the Salon favored historical, biblical, and mythological themes, Impressionists focused on rural landscapes, gardens, and riverbanks. They also depicted urban life, portraying bustling Parisian streets and the growing industrialization of the era. Their preference for painting outdoors influenced their choice of smaller canvases, allowing them to work directly from observation rather than relying on studio sketches.

Due to the limited time available before light conditions changed, Impressionists developed a distinctive style characterized by thick, sketch-like brushstrokes. Unlike the finely detailed figures of traditional art, their works deliberately avoided precision, favoring spontaneity and movement. Critics initially dismissed their paintings as lacking refinement, with art critic Louis Leroy coining the term "Impressionism" in a satirical review of Monet's work. Despite early skepticism, the movement gained recognition for its innovative approach.

Today, Impressionist paintings are celebrated worldwide, exhibited in prestigious museums, and sold for millions at auction. Their groundbreaking techniques and artistic vision have profoundly influenced modern art, shaping the way artists perceive and represent the world around them. Impressionism's legacy endures, proving that artistic rebellion can redefine the boundaries of creativity.

41. What does the word "skepticism" mean?

- (A) A firm belief without evidence.
- (B) A tendency to doubt or question accepted ideas.
- (C) A habit of accepting all claims as true.
- (D) A desire to avoid making decisions.

42. Why were the Impressionists rejected by the Salon?

- (A) They did not conform to mainstream standards.
- (B) They refused to adopt innovative techniques.
- (C) Their work emphasized subtle nuances.
- (D) They preferred to spend long hours in the studio.

43. Which of the following statements about Impressionism is false?

- (A) The Impressionists rejected traditional themes.
- (B) The Impressionists preferred to paint spontaneously.
- (C) The Impressionists focused on natural scenes.
- (D) The Impressionists were interested in depicting sculptures.

44. Which of the following is not favored by the Salon?
(A) Exquisite sketches.
(B) Depiction of passers-by.
(C) Highly detailed and polished artwork.
(D) Strict adherence to conventional standards.
45. What does the word "contemporaries" mean in this passage?
(A) People who share similar views and interests.
(B) People who are younger than someone else.
(C) People who live at the same time as someone else.
(D) People who are older than someone else.
46. Which of the following statements about Impressionism is false?
(A) Impressionist paintings were usually created under controlled lighting conditions.
(B) The Impressionists often used loose brushstrokes.
(C) The Impressionists often painted scenes of everyday life and nature.
(D) Impressionism is characterized by its emphasis on light and color in a bid to portray fleeting moments.
47. Which color was not favored by the Impressionists?
(A) Orange
(B) Green
(C) Yellow
(D) Black
48. According to the passage, which of the following words is closest in meaning to "bustling"?
(A) silent
(B) futile
(C) lively
(D) hostile
49. What is a theme favored by the Salon?
(A) Everyday life of common people.
(B) Farmland and pastures.
(C) Mythological subjects.
(D) Spontaneous outdoor scenes.
50. What does the word "legacy" most closely refer to?
(A) Wealth or property inherited from someone after their death.
(B) An achievement left behind for future generations.
(C) A person's reputation during their lifetime.
(D) An unexpected event or surprise.
